DAY 1

⟳ Status	Not started

WEATHER API DATA

Step 1:

Open VS Code.

Create new folder **weather-dashboard-demo**

Create new folders inside **weather-dashboard-demo : src , tests , data**

Create ' _ _ init __ .py' and 'weather_dashboard.py' inside src folder.

Create requirements.txt, README.md , .env in **weather-dashboard-demo**

Type **git init**

Then **git branch -M main**

echo ".env" >> .gitignore

echo "**pycache**/" >> .gitignore

echo "*.zip" >> .gitignore

 pip install -r .\requirements.txt (check requirements.txt from github)

aws configure and created a plethora of credentials

echo "OPENWEATHER_API_KEY=weather api key here" >> .env

key from https://home.openweathermap.org/

echo "AWS_BUCKET_NAME=weather-dashboard-Vignesh" >> .env

In src→ weather_dasboard.py type da code from github

Run the code . ATB
